TESTIMONIAL FROM A FARMER WITH REGARD TO A MAJOR SOIL PRESERVATION INNOVATION

ERFAHRUNGSBERICHT

A farm with multiple crops requiring a high level of maintenance, lots of vehicle traffic and high-tech equipment.
The major constraint: frequent changes in inflation pressure between the road and the fields.

ERFAHRUNGSRÜCKLAUF

Bericht über die festgestellten Vorteile der Reifen VF VT-Tractor:

- “**Comfort and 10/15 minutes saved each time:** by pushing one button the 4 wheels are inflated at the same time without having to get out of the tractor cab.”
- “**Preserving the structure of the soil:** with low pressure in the fields, the structure of the soil is protected, the slip ratio lowered and therefore fuel consumption reduced.”
- “**Reduction in fuel consumption:** with a low inflation pressure in the fields which reduces slip.”
